

Professional Summary

DevOps Engineer with hands-on experience in AWS (EC2, S3, IAM, RDS, VPC, Route 53), Jenkins CI/CD pipelines, Docker, and Kubernetes. Proficient in DevSecOps using SonarQube, OWASP Dependency-Check, and Trivy for shift-left security. Skilled in Terraform, Ansible, Linux, Nginx, Bash scripting, and infrastructure observability with Prometheus and Grafana.

Professional Experience

DevOps Engineer Intern, iSoftNix Private Limited01/2026 – 03/2026 | Pune

- Deployed and managed containerized applications on AWS EC2 using Docker and Kubernetes, achieving 99% uptime.
- Optimized Jenkins CI/CD pipelines, reducing deployment time from 45 to 18 minutes and cutting release effort by 60%.
- Implemented Prometheus and Grafana monitoring, proactively resolving 3 performance bottlenecks before production impact.
- Configured DNS, SSL/TLS certificates, and Nginx reverse proxy for 2 production apps with zero downtime.
- Managed Git/GitHub version control for a 5-member team, reducing merge conflicts by 35% through better branching

Education

Bachelor of Engineering in Computer Science, Sinhgad Institute of Technology, Pune2021 – 2025 | Pune

CGPA: 7.88 / 10

Technical Skills

Cloud (AWS) — EC2, S3, IAM, RDS, VPC, Route 53, EKS
Containers — Docker, Kubernetes (EKS), Docker Hub, Container Registry
CI/CD — Jenkins, Maven, Git, GitHub, Webhooks, Pipeline-as-Code
DevSecOps — SonarQube, OWASP Dependency-Check, Trivy, Quality Gates, Vulnerability Scanning
IaC & Config — Terraform, Ansible
Monitoring — Prometheus, Grafana, Alertmanager
Networking — DNS, TCP/IP, HTTP/HTTPS, Load Balancing, Nginx, Reverse Proxy, SSL/TLS
Languages — Java, Spring Boot, Bash, Shell Scripting, MySQL, Linux (Ubuntu), Windows

Certifications

AWS Zero to Hero Issuer: Train With Shubham	DevOps Basic to Advanced Issuer: Train With Shubham	Linux Fundamentals Issuer: Train With Shubham

Projects

Production-Grade Kubernetes Deployment on AWS EKS: Auto-Scaling, CI/CD Automation, and Observability

Tech: AWS EC2, Docker, Kubernetes (EKS), Jenkins, GitHub, Prometheus, Grafana, Helm, Linux

- Deployed a two-tier containerized Spring Boot application on **Amazon EKS** using **Docker and Kubernetes**, managing application configuration and sensitive data securely via **ConfigMaps and Secrets**, and exposing services through **NGINX Ingress Controller** for streamlined external access.
- Implemented **Horizontal Pod Autoscaler (HPA)** and Kubernetes rolling updates to enable automatic scaling and zero-downtime deployments across both application tiers.
- Built Jenkins **CI/CD pipelines** for Maven build automation, Docker image creation, Docker Hub publishing, and automated Kubernetes deployments triggered via **GitHub integration**.
- Deployed **Prometheus and Grafana** using Helm to monitor cluster, node, pod, and application metrics, enabling real-time observability and proactive issue detection.

Secure CI/CD Pipeline with Integrated SAST/SCA Scanning for Containerized Microservices on AWS EKS

Tech: Jenkins, SonarQube, OWASP Dependency-Check, Trivy, Docker, Kubernetes (EKS), Maven, Git, GitHub, Java 17, Spring Boot, AWS EC2

- Architected a **shift-left DevSecOps pipeline on AWS**, integrating **Jenkins, SonarQube Quality Gates, OWASP Dependency-Check (SCA), and Trivy (container image scanning)** to enforce security checks on every commit before merge.
- Eliminated manual security audits by automating vulnerability scanning, cutting review time by 70% and identifying 15+ dependency and container vulnerabilities pre-deployment, preventing insecure code from reaching production.
- Containerized a Java 17 Spring Boot application using Docker and deployed it on **Amazon EKS, with Jenkins-triggered, webhook-driven CI/CD** enabling automated, versioned image builds and rolling deployments on every push to main.
- Enforced policy-based quality gates so builds automatically failed on **critical CVEs or code-quality violations**, ensuring only vetted artifacts progressed through the pipeline.

Production-Ready AWS Infrastructure Automation with Terraform & Ansible

- Automated AWS infrastructure provisioning using **Terraform** to deploy VPC, Subnets, Internet Gateway, Route Tables, Security Groups, Elastic IPs, and EC2 instances.
- Integrated **Terraform + Ansible** for end-to-end infrastructure provisioning and automated post-deployment server configuration.
- Configured an **Ansible Control Node** and managed multiple Ubuntu servers using **Playbooks** and **Roles** for consistent configuration management.
- Automated installation of **Java 17, Docker, Git, Nginx, and Jenkins** with Ansible and implemented secure **SSH-based** server management using centralized inventory.
