Professional Summary

DevOps Engineer with hands-on experience in AWS (EC2, S3, IAM, RDS, VPC, Route 53), Jenkins CI/CD pipelines, Docker, and Kubernetes. Proficient in DevSecOps using SonarQube, OWASP Dependency-Check, and Trivy for shift-left security. Skilled in Terraform, Ansible, Linux, Nginx, Bash scripting, and infrastructure observability with Prometheus and Grafana.

Education

Bachelor of Engineering in Computer Science, *Sinhgad Institute of Technology, Pune* 2021 – 2025 | Pune
CGPA: 7.88 / 10

Professional Experience

DevOps Intern — Davine Technologies 08/2026 – Present | Mumbai, Remote
- Hands-on experience with **Linux administration, networking, and SSH**.
- Worked with **Git & GitHub**, branching, merging, Pull Requests, and collaboration.
- Developed **Bash scripts** for automation, backups, log management, and Cron jobs.
- Configured **Apache/Nginx web servers** and deployed basic web applications.
- Built **Jenkins CI/CD pipelines** with GitHub integration and webhooks.
- Practiced **Terraform & Ansible** for infrastructure provisioning and configuration management.

DevOps Engineer Intern — iSoftNix Private Limited 01/2026 – 03/2026 | Pune
- Deployed containerized applications on **AWS EC2 using Docker & Kubernetes**, maintaining 99% uptime.
- Optimized **Jenkins CI/CD pipelines**, reducing deployment time from 45 to 18 minutes.
- Implemented **Prometheus & Grafana** for proactive application monitoring and performance analysis.
- Configured **DNS, SSL/TLS & Nginx reverse proxy** for production applications with zero downtime.
- Managed **Git/GitHub workflows, branching & collaboration**, reducing merge conflicts by 35%.

Technical Skills

Cloud (AWS) — EC2, S3, IAM, RDS, VPC, Route 53, EKS
Containers — Docker, Kubernetes (EKS), Docker Hub, Container Registry
CI/CD — Jenkins, Maven, Git, GitHub, Webhooks, Pipeline-as-Code
DevSecOps — SonarQube, OWASP Dependency-Check, Trivy, Quality Gates, Vulnerability Scanning
IaC & Config — Terraform, Ansible
Monitoring — Prometheus, Grafana, Alertmanager
Networking — DNS, TCP/IP, HTTP/HTTPS, Load Balancing, Nginx, Reverse Proxy, SSL/TLS
Languages — Java, Spring Boot, Bash, Shell Scripting, MySQL, Linux (Ubuntu), Windows

Projects

Production-Grade Kubernetes Deployment on AWS EKS: Auto-Scaling, CI/CD Automation, and Observability
Tech: AWS EKS, EC2, Docker, Kubernetes, Jenkins, GitHub, Maven, MySQL, NGINX Ingress, Helm, Prometheus, Grafana, Linux
- Deployed a containerized **Spring Boot + MySQL application on AWS EKS**, using Kubernetes Deployments, Services, StatefulSet, ConfigMaps, Secrets and PVC-backed AWS EBS storage.
- Built **Jenkins CI/CD automation** with GitHub webhooks for Maven build/test, Docker image creation, Docker Hub publishing and automated EKS deployments.
- Implemented **HPA (2–4 replicas), Rolling Updates, readiness/liveness probes and automatic rollback** for scalable and reliable application deployments.
- Deployed **NGINX Ingress, Prometheus and Grafana using Helm** for external traffic routing, Kubernetes monitoring and real-time observability.

Secure CI/CD Pipeline with Integrated SAST/SCA Scanning for Containerized Microservices on AWS EKS
Tech: Jenkins, SonarQube, OWASP Dependency-Check, Trivy, Docker, Kubernetes (EKS), Maven, Git, GitHub, Java 17, Spring Boot, AWS EC2
- Architected a **shift-left DevSecOps pipeline on AWS**, integrating **Jenkins, SonarQube Quality Gates, OWASP Dependency-Check (SCA), and Trivy (container image scanning)** to enforce security checks on every commit before merge.
- Eliminated manual security audits by automating vulnerability scanning, cutting review time by 70% and identifying 15+ dependency and container vulnerabilities pre-deployment, preventing insecure code from reaching production.
- Containerized a Java 17 Spring Boot application using Docker and deployed it on **Amazon EKS, with Jenkins-triggered, webhook-driven CI/CD** enabling automated, versioned image builds and rolling deployments on every push to main.
- Enforced policy-based quality gates so builds automatically failed on **critical CVEs or code-quality violations**, ensuring only vetted artifacts progressed through the pipeline.

Production-Ready AWS Infrastructure Automation with Terraform & Ansible
- Automated AWS infrastructure provisioning using **Terraform** to deploy VPC, Subnets, Internet Gateway, Route Tables, Security Groups, Elastic IPs, and EC2 instances.
- Integrated **Terraform + Ansible** for end-to-end infrastructure provisioning and automated post-deployment server configuration.
- Configured an **Ansible Control Node** and managed multiple Ubuntu servers using **Playbooks** and **Roles** for consistent configuration management.
- Automated installation of **Java 17, Docker, Git, Nginx, and Jenkins** with Ansible and implemented secure **SSH-based** server management using centralized inventory.

Certifications

AWS Certified Cloud Practitioner (CLF-C02) — Amazon Web Services (AWS)

AWS Certified Solutions Architect – Associate (SAA-C03) — Amazon Web Services (AWS) (In Progress)

DevOps Basic to Advanced — Train With Shubham
